

IT IS A FACT

That the Burrs in the Giant Killer Grinder
are 25 inches in Diameter.

It is from 6 to 9 inches **LARGER THAN ANY OTHER SWEEP MILL MADE**, and will handle more grain with less power than any other mill of the kind on the market.

Do not confound this Grinder with the old style conical crushers which some manufacturers continue to make and advertise as feed grinders.

Remember the crown of the **GIANT KILLER** contains over 100 self-sharpening teeth, and **NEW CHILLED BURRS COST BUT \$2.00.**

THOS. CASCADEN, Jr., Waterloo, Iowa.
